## Studless Winter Tire

The Observe GSi-6 featuring Toyo's signature studless Microbit Technology™, is designed to handle the harshest Canadian winters. The GSi-6 HP has been expanded to include 2 more patterns the GSi-6 and GSi-6 LS. These 3 patterns provide an extensive product offering that has a fitment for a variety of passenger cars, CUV's, SUV's and light trucks.

### Advanced tread design

Improved performance not only in snow and slush, but on ice and cold wet roads as well.

### Spiral edge sipe

A unique 360 degree spiral edge sipe is designed to improve traction while accelerating, cornering or braking.

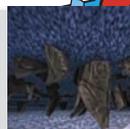

**Improved performance not only in snow and slush, but on ice and cold wet roads as well.**

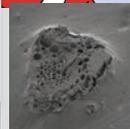

Winter traction - stable ride!

**Microbit Technology** improves grip on any slippery surface.

### Advanced compounding

Silica and a high grip polymer help keep the tire pliable during colder temperatures.

## ADVANCED COMPOUNDING

High levels of silica along with a new high grip polymer blended in the rubber compound keeps the tire pliable during colder temperatures while also improving wet weather traction. Microbit Technology further improves grip on any slippery surface.

### Siping to handle all slippery surfaces

Advanced sipe technology improves traction on ice while cornering, braking or accelerating.

## 3 VARIATIONS OF ONE PATTERN!

Toyo wanted to ensure the Observe GSi-6 was engineered to suit the various vehicle segments and applications. To achieve this, slight variations were incorporated into the construction and design to address the unique attributes of passenger cars, CUV's, SUV's and light trucks.

### GSi-6 GSi-6 HP GSi-6 LS

Added comfort and safety during winter conditions.

Increased handling to help maintain a performance feel.

Ready to carry the extra loads needed for larger vehicles, SUVs and pickups.

# OBSERVE G3-ICE

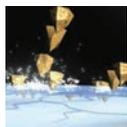

Directional winter tire for passenger vehicles.

A winter tire with a twist ...

**Great traction ... but with a more comfortable ride than expected from a winter tire!**

Toyos Microbit studless tire technology and advanced directional tread pattern improve handling in snow, ice or slush, while offering superior ride comfort.

### Studless ICE traction

Walnut shells

Microbit walnut shell technology bites into slippery surfaces.

### Pinned for studs

## What's the secret to Toyo's winter traction?

A combination of advanced technology and rigorous testing. TOYO Observe winter tires are designed for use in even the worst of Canadian winters.

Crushed black walnut shells embedded into the tread compound increases traction and braking on slippery surfaces. It's like having thousands of tiny spikes helping you grip the road.

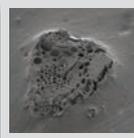

Why purified walnut shells? Lot's of reasons!

[toyohasnuts.ca](http://toyohasnuts.ca)

Increased levels of silica, polymers and improved dispersion in the compound allows better flexibility at lower temperatures enhancing grip and braking, while maintaining traction in low temperatures on all surfaces.

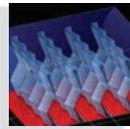

[toyohasnuts.ca](http://toyohasnuts.ca)

An absorbent carbonic powder made from bamboo charcoal removes the thin water layer allowing for better contact. Better contact means better traction.

[toyohasnuts.ca](http://toyohasnuts.ca)

Advancements in design technology like "saw toothed" edges and "multi-wave" sipes increase grip during a variety of winter conditions.

[toyohasnuts.ca](http://toyohasnuts.ca)

At TOYO TIRES, we design our winter tires to be "all-around" winter tires ready for all winter conditions.

## OBSERVE G3-ICE

**OPTIMIZED SCRATCH EFFECT FOR BETTER TRACTION AND QUIETER RIDE**

When studs are installed the Observe G3-ICE offers enhanced ice performance due to a newly optimized stud distribution pattern which increases road contact across the tread face.

Lines in ice left by Competitor's Tire

On its own the Observe G3-ICE with advanced tread design and Toyo's Microbit studless technology performs great in all winter conditions. For added traction the Observe G3-ICE is designed to accept studs.

### Factory Studded: "Break-in" Period:

When studded tires are installed on your vehicle, a "break-in" period of 500 kilometers is strongly recommended to allow the studs to effectively solidify their position in the tire tread. During this "break-in" period, we recommend to avoid harsh braking, rapid acceleration and aggressive driving for the first 500 kilometers after installation.
