TOYO'S "STATE OF THE ART" COMPUTER TECHNOLOGY REDEFINES ALL-SEASON PERFORMANCE IN BOTH HANDLING AND APPEARANCE.

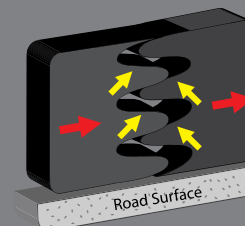

## Premium Ultra High Performance All Season Radial

The PROXES 4 is designed to offer great looks and enhanced traction in a variety of weather conditions. An all season ultra high performance radial the PROXES 4 is designed as an ideal replacement for today's Original Equipment speed rated tires or as a plus fitment upgrade to many sports model or tuner type vehicles.

## Exceptional Handling & Braking Performance

### Multi-Wave Sipe Design

Sipes improve wet traction, but they also reduce tread block rigidity. Rigid tread blocks are desirable for better dry handling. TOYO has overcome this inherent design compromise with its new proprietary "Multi-Wave" sipe technology. This design provides tread block support from the sipe walls which reduces excessive deformation while cornering or braking. Excessive tread block deformation is also what leads to the "heel and toe" wear that causes increased pattern noise as a tire wears. Therefore the "Multi-Wave" sipe design also helps reduce tire noise.

### High Angle Tread Grooves

>> Evacuate water to improve wet traction.

### Curving Center Rib

>> Curving center rib enhances directional stability and provides continuous contact with the road.

### Silica-Reinforced, High-Grip Tread Compound

>> Toyo Tire's "Generation S" silica-reinforced tread compound increases the friction coefficient between the contact patch and the road surface. The result is enhanced wet performance without sacrificing tire wear.

### Superior UHP Tread Life

>> With a UTQG rating of 300, Toyo Tire's proprietary tread compounding developments strike the perfect balance between tread life and performance.

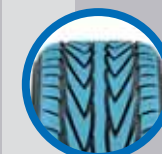

### Multi-Wave Sipes

>> Toyo Tires multi-wave sipe technology improves tread block stability by reducing block movement. This increases traction and tread life while reducing irregular wear and road noise.

### Unique "W-Shape" Tread Pattern

>> The Toyo Proxes® 4™ features an aggressive, unidirectional, w-shaped tread design with high-angle grooves for water evacuation, a variably pitched offset tread pattern that lowers noise.
