

TOYO H09

The Toyo[®] H09 is a euro-metric “all-weather” tire designed for commercial cargo van drivers who need the added winter safety during unexpected snow falls and cold weather conditions but don’t want to incur the expense of buying, installing and storing winter tires.

The Toyo[®] H09 is designed to be positioned between an all-season and winter tire with a tread design that provides better ice and snow traction than a typical all-season tire and longer tread life than a winter tire.

TOYO H09				1/32"	OD	OW	SLR	RPK	RIM WIDTHS

Tire data subject to change. Visit toyotires.ca for current data.

Features and Benefits Include:

- **4 circumferential grooves:** For better traction on wet and snow covered surfaces.
- **Wave siping:** Higher edge effects and optimized ground contact on snow and ice surfaces.
- **Wide shoulder voids:** Delivers improved snow and slush traction.

Transport Canada Approved for Severe Winter Conditions

Transport Canada in conjunction with the Rubber Association of Canada and the U.S. Tire Manufacturers Association have introduced a performance standard requirement for snow tires. This standard was developed to help consumers distinguish between an “all season” tire (represented by the symbol “M+S”) and tires specifically designed for use in severe winter conditions. Tires now meeting this standard for winter tires will display a mountain/snowflake pictograph on the sidewall in addition to the M+S symbol.
